

HOW TO CROSS COMPILE OSCAM EMU USING SIMPLEBUILD METHOD

engineer/khan15

1. Open Terminal.
2. Create a directory named “oscam-emu”. (optional)
`mkdir oscam-emu`
3. Go to “oscam-emu” directory.
`cd oscam-emu`
4. Create a directory named “simplebuild”.
`mkdir simplebuild`
5. Go to “simplebuild” directory.
`cd simplebuild`
6. Get simplebuild script.
`wget ss4200.homelinux.com/oscam/simplebuild`
7. Change attributes to 777.
`chmod 777 simplebuild`
8. Install simple build.
`./simplebuild debinstall`
9. Go to directory named “patches”. (needed to build oscam-emu)
`cd patches`
10. Get “oscam-emu.patch”. (needed to build oscam-emu)
`wget https://github.com/oscam-emu/oscam-emu/raw/master/oscam-emu.patch`
11. Get back to the main “simplebuild” directory. (only needed if you undergone through steps 9-10)
`cd ..`
12. Open Simplebuild menu.
`./simplebuild menu`
13. Add toolchains for the platforms one by one.
14. Use various menus to configure oscam and build it. Don’t forget to select patch option while configuring the oscam in the menu if you want to compile oscam-emu. Use spacebar to select or unselect an option.
15. Use following commands only to compile oscam-emu again if you have already setup simplebuild once.
`cd oscam-emu`
`cd simplebuild`
`./simplebuild menu`
16. If you want to use the latest “oscam-emu.patch” available online, then delete the old “oscam-emu.patch” file from the patches directory and repeat the steps from steps 9 to 14.
